KAMO Power is a not-for-profit Generation & Transmission Cooperative serving seventeen rural electric distribution cooperatives. KAMO Power exists to serve the needs of its member cooperatives by providing safe, low-cost, reliable power.

KAMO Power accomplishes these objectives through its transmission network, qualified and dedicated personnel, effective system operations, maintenance and planning and long term rate stability.

In order to meet these goals, significant upgrades to the transmission network are occasionally required. Regional electric transmission constraints have been identified that will impact the reliability of service to our member owners and to the region.

KAMO Power will be constructing a 345,000 volt transmission line from west of Jasper Missouri in Jasper County to near Pryor Oklahoma in Mayes County to correct these emerging reliability issues and to help ensure a reliable transmission system in the region into the future.
